Alder: lowest upfront cost that meets 200 km

Criterion	Alder Lowest upfront cost meeting minimum	Birch	Cedar	Dogwood
Range, kilometres	210	240	190	220
Meets 200 km minimum	Yes	Yes	No	Yes
Upfront cost, USD thousands	38	44	35	47
Annual energy cost, USD thousands†	4.2	3.9	4.5	3.8

Alder clears the minimum by 10 km. Cedar is cheapest upfront (35) but its 190 km misses the minimum. Alder is not best on every criterion: Birch has more range; Birch and Dogwood have lower annual energy cost.

† Assumes 18,000 km of service per vehicle per year; excludes maintenance and charging-infrastructure costs.

Fictional planning estimates; no uncertainty ranges provided. The brief does not say whether upfront cost is per vehicle or per fleet.
