RIVERBANK GREENHOUSE LIGHTING · STEERING GROUP

The pilot supports measuring again—not wider installation yet

DECISION SUPPORTED NOW

Authorize one more measurement cycle

Use it to build a stronger evidence base before deciding on wider installation.

+6% median yield difference

Against each site's reference plots; 12 of 18 plots had a positive difference.

−3% to +14% individual plot differences

Limited pilot
18 plots · 3 sites · 1 winter growing cycle

Not causal evidence
Plots not randomized; crop mix and baseline conditions differed between sites.

Economics unknown
Installation cost and energy use were not measured.

Wider install
Not approved; yield alone does not settle the decision.

Reported pilot results; observed differences do not establish that lighting caused yield changes.
