PROGRAM LEADS · EVIDENCE CHECK

Neither question has a defensible overall answer yet

BARRIER MOST COMMON OVERALL?

Not comparable

- **North:** 40 homeowners surveyed; multiple selections allowed. Installer scheduling 28, upfront cost 17, unclear eligibility 9. Counts overlap.
- **South:** 9 of 15 reviewed open cases mentioned waiting for an installer; other barriers weren't recorded. Total homeowners served is unknown.

Different reporting methods and denominators; do not pool or rank across partners.

DID TURNAROUND IMPROVE?

Change unknown

- **South recent:** median 8 days among 11 cases with times; 4 of 15 reviewed cases have no time recorded.
- "Around two weeks last spring" is an unmethoded note with no identified cases, sample size, or method.
- **North:** no turnaround times supplied.

The recent partial median and the spring estimate are not comparable.

To answer: collect barrier reports with a shared period, definitions, homeowner denominator, and consistent overlap rule; compare turnaround using the same start/end definition, coverage, and method in a comparable baseline and recent period.

Current evidence supports partner-specific descriptions only—not an overall barrier ranking or a trend claim.
