PROGRAM LEADS · EVIDENCE CHECK

# We can’t yet name the overall top barrier—or say turnaround improved.

### Barrier evidence: keep sources separate

**North · 40 surveyed homeowners**

**28 / 40** selected installer scheduling; 17 selected upfront cost; 9 selected unclear eligibility.

Multiple selections were allowed, so counts overlap. This describes North respondents—not a comparable overall ranking.

### South · different evidence, not rankable against North

15 open cases reviewed (homeowners served overall not reported); 9 mentioned waiting for an installer. Other barriers were not systematically recorded.

Cases are not a compatible denominator for North’s multi-select survey.

Do not pool or compare partner counts as an overall ranking: North surveyed 40 homeowners with overlapping multi-select responses, while South reviewed 15 open cases with no served-population
