RIVERBANK GREENHOUSE LIGHTING PILOT

The pilot supports deciding on another measurement cycle. It does not yet support wider installation.

What the pilot measured

MEASURE	PILOT RESULT
SCOPE	18 greenhouse plots at 3 sites, one winter growing cycle
MEDIAN YIELD DIFFERENCE VS. EACH SITE'S REFERENCE PLOTS	**+6%**
RANGE OF INDIVIDUAL PLOT DIFFERENCES	**–3% to +14%**
PLOTS WITH A POSITIVE DIFFERENCE	**12 of 18 (6 did not)**
PLOT ASSIGNMENT	Not random. Crop mix and baseline conditions differed between sites.
INSTALLATION COST	Not measured
ENERGY USE	Not measured

The +6% is an observed difference from non-random comparison with reference plots. The pilot did not show that lighting caused it. Figures are as reported for this fictional evaluation scenario.

Next steps the evidence speaks to

OPTION	SUPPORTED BY THE PILOT?
AUTHORIZE ANOTHER MEASUREMENT CYCLE	**Decision available** The group can decide this. The pilot does not answer the cost, energy use, or causal questions.
APPROVE WIDER INSTALLATION	**Not yet** Yield evidence alone. Cost and energy use have not been measured.
