PROGRAM LEADS · EVIDENCE CHECK

Installer scheduling leads North's survey; overall ranking and improvement remain unknown

The two partner summaries use different units and methods, and neither provides a comparable before-and-after turnaround measure.

Partner North · homeowner survey

28 / 40 selected installer scheduling

Installer scheduling	28
Unfront cost	17

Partner South · open case review

9 / 15 cases mentioned waiting for an installer

8 days

What can be answered

North's most selected listed barrier was installer scheduling. Which barrier is most common overall, and whether turnaround improved, cannot be established from these summaries.

To answer both parts

- Use a shared period definition and denominator across partners; define how overlapping barrier selections are counted.
- Report complete turnaround times with sample size and missingness, plus a baseline measured with the same method.
